Subject: RE: NJ-EPA PFAS study - 2 additional samples

Erica,

We will be on the lookout for these two samples starting tomorrow.

We had a good internal discussion last week to begin to assess what we know about the water samples that have been run so far.

A couple of things came up:

First off, do we have a sample of the Solvay outfall or a well sample that might be expected to represent the most significant impact? If you could identify this sample for us I think we'd take a very close look at it with the expectation that it would help us understand the other samples a little better.

Secondly, can you send us a copy of the NPDES permit and corresponding air permit for this facility? Chemours too? The more we know about what's going on inside these facilities the better we'll be able to figure out what to look for in the environmental samples.

Also, I've asked our internal air guys (Tom Pierce et al.) if they would be interesting in working with us on this project. We're hoping this is OK with you and that at the very least this will help inform our analyses and help us describe any air-related patterns that may be discoverable.

In any case, I think it would be wise to invite NJDEP air folks and USEPA air folks to get together to talk about how to analyze the data that will be coming out soon.

Please let us know what you think about all of this.

Thank you very much,

Andy

Subject: NJ-EPA PFAS study - 2 additional samples

Hi Andy,

NJDEP was able to gain access to sample two private wells for the study. They are substitutes for locations that did not grant access to sample. Handex will be mailing the samples to EPA-NERL after sampling next Wednesday, March 7.

As we discussed, I'll send updated sample tables to account for changes/additions, and include sample number, geo coordinates and any location description information.

Thanks, Erica

Erica Bergman
